

INNER WHEEL FOREVER®

New garden rose baptized by
HRH Princess Benedikte of Denmark at the
16th International Inner Wheel Convention in Copenhagen

The selection of the Inner Wheel Forever® rose

The **Inner Wheel Forever®** garden rose is the result of a long breeding process from Danish Rose Breeder Rosa Eskelund.

With a brush Rosa Eskelund cross-pollinates the roses, just like a bee in the nature.

The **Inner Wheel Forever®** garden rose has been selected from more than 1000 new garden roses that has been tested on open land in Denmark and Holland during the past 4 years.

It is produced both in Denmark, Australia and Japan, and in near future it will be produced in even more countries around the world.

With her passion for roses, Rosa has created many great successes in both mini roses for indoor use, garden roses and cut roses.

Rosas advice on garden roses

- You can plant both bare-rooted and potted garden roses in your garden.
- The bare-rooted roses should be planted in November-March.
- Potted garden roses can be planted both in the spring, summer and fall.
- Roses like sunshine, space around them and good soil.
- The roses need fertilizer 4 times in the growing season.
- Cut the roses in the beginning of April when the frost is over.
- The pruning will keep the roses beautiful and healthy for many years.
